

Email Hosting

Dependable email for business or personal use

- Business-class email with strong security
- Mailbox storage that grows with you
- Free, unlimited migrations for sites and email

Storage that scales

Mailbox sizes can be raised whenever you like, whether you need 10 GB, 100 GB or more.

Email that arrives

We use SPF (Sender Policy Framework) and DKIM (DomainKeys Identified Mail) to authenticate your messages, which protects your domain's reputation and helps your mail reach inboxes instead of spam folders.

Simple to manage

Set up forwarding, out-of-office replies, signatures and storage yourself. Moving your existing mailboxes to us is quick and painless.

Separate from your website

Unlike providers built on cPanel, we run email on fully redundant servers that are separate from website hosting. Busy periods on your site won't slow your mail or make it unavailable.

Layered security

Messages are scanned for viruses at the network level before they reach your device, and filters remove spam. Global deny-lists add protection, and you can set your own allow and deny lists to control what gets through.

Access it anywhere

Use fast browser-based webmail, or connect Outlook, Apple Mail or another app on any device, anywhere.

A clean sending reputation

Bulk marketing email is not allowed on our network, which keeps our mail servers in good standing with the big mail providers.

Premium Email

Requires Premium Email to be enabled.

Premium Email adds enhanced webmail with contact and calendar sync for popular mail programs, and a 50GB mailbox quota.
