

Managed Cloud Hosting

Your own cloud server on 10MB, AWS or Google, managed for you

When a website carries real revenue, shared hosting stops being enough. Managed cloud hosting gives you a server of your own on top-tier infrastructure, and our team handles the technical work.

Three steps

1. Pick the server size you need.
2. Pick where it runs: 10MB Cloud, AWS or Google Cloud.
3. We move your sites across for you, free of charge.

It suits busy online stores, growing businesses, and agencies or developers who host client sites.

Pricing

Cores	1	2	4	8	16	32+
10MB Cloud	(call for price)	(call for price)	(call for price)	(call for price)	(call for price)	(call for price)
AWS	(call for price)	(call for price)	(call for price)	(call for price)	(call for price)	(call for price)
Google Cloud	(call for price)	(call for price)	(call for price)	(call for price)	(call for price)	(call for price)

AWS and Google Cloud add bandwidth charges, and 10MB Cloud charges for bandwidth over its included allowance. Call us for a quote that matches your site.

What you get

- 99.99% uptime guarantee
- Powered by 100% renewable energy
- Expert support
- Tuned for ecommerce
- Unlimited 10GB mailboxes
- Unlimited databases
- Free migrations, any number
- Free daily backups
- Free SSL certificates
- Free unmetered CDN
- Website acceleration suite
- Enterprise-level DDoS protection
- No LVE limits
- Optimized PHP-FPM
- 80+ one-click apps
- Optimized for WordPress
- Magento support with Redis and Elasticsearch
- No cap on PHP workers
- WordPress staging
- WordPress cloning
- WordPress edge-caching plugin
- Automatic malware scans
- Full DNS control
- Git version control interface
- PCI compliant hosting

Why choose managed cloud

A single control panel

Run everything from one dashboard. You could keep one site on shared hosting, two on AWS, two on Google Cloud and five on 10MB Cloud and still see them side by side. The same panel handles databases, domains, email, files and Git.

Specialists behind the server

Your server runs in the same kind of environment used by the world's largest companies, and trained hosting and network-security staff look after it.

Top-tier data centres and networks

Choose data centres in regions around the world, on the same networks used by Amazon and Google. Traffic takes short, well-prioritized routes, which helps your pages load sooner.

Email at no extra cost

Business email is included with unlimited mailboxes and runs on separate infrastructure, so it doesn't consume your server's compute or storage.

Ready for online stores

Pick a server tuned for ecommerce. PHP-FPM and OPcache speed up WooCommerce, and Redis with Elasticsearch supports Magento's newer features. A faster, safer store can convert more visitors into buyers.

Dedicated resources

Compute, memory and storage are reserved for your sites alone. The hardware comes from established brands including Intel, Samsung and Dell.

Easy to resize

If your site approaches its limits, move up to a larger size straight away. There is no rebuild and no waiting.

Less downtime

Because we maintain the underlying systems, hardware and software faults are far less likely to take your site offline.

80+ apps, free

More than eighty applications install in one click, among them WordPress, Drupal, Joomla!, Laravel, OpenCart, Magento, Moodle, PrestaShop and Roundcube.

FAQs

What is managed cloud hosting?

It is a virtual private server (VPS) reserved for your website or websites. Its size decides how many sites it can comfortably run. Unlike shared hosting, no resources are shared with other customers. You don't set up or maintain the server yourself: our team, or the AWS and Google teams, do that. You manage it from a simple control panel, the same one used for any other service you buy from us. Ask us if you'd like a sizing recommendation.

Should I choose shared or managed cloud hosting?

For small businesses and personal sites, our shared WordPress or Linux hosting is capable and the best value. Choose managed cloud when a site is very busy, or when you run several demanding sites. We're happy to talk through your situation.

Which is better: 10MB Cloud, AWS or Google Cloud?

10MB Cloud is usually the best value, in part because it includes bandwidth up to a limit. AWS is the largest cloud platform, with Google Cloud close behind. Both have global coverage and offer web hosting, and AWS offers the wider range of services. If you already run on AWS or Google, we can migrate that setup to us to make it simpler and more affordable. Contact us for an honest recommendation.
