

StackCP Control Panel

One dashboard for your sites, email, domains and security

Run many sites at once

StackCP's multi-site tools let you launch, pause and deploy websites, edit DNS records, create mailboxes and install scripts, in bulk and in a few clicks.

Built-in speed tools

The integrated optimization suite works at the server level, so you don't need extra plugins. It includes an unlimited global CDN, an edge caching engine, and code and image optimization to speed up your sites worldwide. Switch it on with one click, or adjust every setting yourself.

Domain control

Update WHOIS details, change nameservers and manage privacy from the same place. DNS controls are built in, along with DNSSEC protection.

Email

The mail system supports SMTP, POP3 and IMAP and works with the major email programs from Microsoft, Google, Apple and Mozilla. A friendly webmail interface and layered spam and virus filtering protect all your users.

Developer tools

Deploy straight from your Git repositories with the built-in Git manager, choose your PHP versions and settings, and automate jobs with unlimited cron.

Migrations

The Migration Centre moves sites from other hosts in minutes at no charge and with no limit on how many. You can move everything, including files, databases and email, or only selected data, without downtime or data loss.

File management

Work with files in the built-in file manager, or over secure FTP (SFTP) and SSH. A file permission scanner checks that your files are properly protected.

Login and access security

Two-factor authentication, an FTP security lock and brute-force login protection keep the panel and your files safe from unauthorized access.

Databases

Create as many databases as you like. Dedicated database resources remove row-count and query limits, and you can reach your data through phpMyAdmin or remote MySQL connections.

Feature overview

Web Tools • File Manager • FTP Accounts • PHP Version • 80+ 1-Click Apps • MySQL & phpMyAdmin • SSH Access • Integrated Git Version Control • Multi-Language Control Panel	Domain Management • Subdomains • Change Nameservers • Domain Privacy • Manage Contacts • Manage DNS • DNSSEC • WHOIS	Email • Add/Remove Email Accounts • Catch-all Forwarders • Autoresponders • Junk Mail Filters • Webmail • DKIM Signatures
Backups & Security • Free SSL Certs. • FTP Access & Lock • Allow External SSL • Backup/Restore • Two-Factor Authentication • Password Protection	CDN • Web Optimization • Edge Caching • Bandwidth Reports • CDN Security Headers • Block Visitors • Traffic Distribution	Statistics & Reports • Bandwidth Stats • Disk Usage Stats • Access/Error Logs • Auto Diagnostics • AWStats • Malware Report
WordPress Tools • Staging Sites • Manage Themes • Manage & Update Plugins • Manage Users • Checksum Report • Site IDs and URLs • Reinstall WordPress
