

WordPress Hosting

Hosting engineered for WordPress sites that are growing

- Autoscaling that matches your site's demand
- Free built-in WordPress staging and cloning
- Free global CDN and edge cache
- 100% green hosting
- Expert support, day and night
- One-click migration
- Unlimited concurrent visitors, no LVE limits

Your WordPress site deserves hosting that keeps it quick and safe. Our platform is tuned for WordPress and scales to suit sites of any size.

Performance tuned for WordPress

Autoscaling gives your site more resources when demand rises, so pages keep loading fast and visitors stay engaged. The free global CDN and edge caching serve your pages from a location near each visitor.

A control panel that keeps it simple

In StackCP, our own control panel, you can manage sites, databases, email, domains and security from one place. One-click WordPress installs and quick migrations mean you don't need technical skills to stay in control.

Tools made for WordPress

One-click staging copies your site so you can try new content or code safely, then publish the changes when they're ready. Our StackCache technology speeds up page loads, and its plugin lets you adjust the settings. WordPress core updates and security patches are applied automatically. A checksum report compares your core files with the official WordPress repository and warns you about anything suspicious.

Security for WordPress

Protection is built into every layer: DDoS filtering, a web application firewall and daily automated malware scans. Free wildcard SSL certificates keep your visitors' data encrypted.

Powered by renewable energy

All hosting runs on 100% renewable energy, so you can host your site sustainably without giving up speed.

High-frequency option

Requires Website Turbo to be enabled.

High-frequency WordPress hosting uses CPUs with very fast clock speeds to handle complex tasks and deliver pages with little delay. Because more instructions are processed each second, page loads drop noticeably, and demanding sites with heavy traffic or advanced features stay fast and smooth.

Frequently Asked Questions

How does autoscaling work?

The platform monitors your site live and gives it extra CPU, memory and bandwidth when traffic spikes, so it stays quick whatever the load.

Can I move my existing WordPress site?

Yes. Migration is free and takes one click. The Migration Centre transfers your site, database and email with no downtime.

What security is included?

Enterprise-level protection: DDoS filtering, a web application firewall, automatic malware scans and free SSL certificates, all monitored and kept current.

Is it really eco-friendly?

Yes. Our hosting runs on 100% renewable energy, keeping your site's footprint small without hurting performance.

What support do I get?

Help with WordPress, migrations and technical problems from our own staff. Support is never outsourced.

Can I host non-WordPress sites here?

This platform is optimized for WordPress. For other kinds of sites, our standard web hosting plans support a wider range of applications and one-click installs.
